Hello Ms Shaw,

I left a message on your phone and am following up with this email.

Escopeta hired Jacobs to collect the baseline sediment and water column samples prior to the Spartan 151 jack-up rig being put into place in the KLU. We started sampling yesterday and had no luck gathering sediment using the Van Veen sampler. We anticipated that this might occur, so we had a dredge sampler fabricated out of pipe. Unfortunately, all the pipe dredge has been able to collect are rocks. We are looking for some direction on how you would like us to proceed.

The water column samples have been collected, but we don't believe additional efforts with the Van Veen or pipe dredge will be successful. Thank you.

Terry
